

MULTICYCLE

45 years of premium Dutch bike craft

ALL MULTICYCLE E-BIKES OFFER:

- A choice of high (H) or low (L) instep frame
- Dynamic ride quality
- Shimano gears and motor
- Sublime finish

Multicycle is a bike brand with a long history in the Netherlands. Driven by passion for quality, high-end craftsmanship, and personal service from the outset.

Multicycle was founded by Nico Bieleveldt and his wife in the Netherlands' Achterhoek region in 1977. In those days, recreational bicycles were very popular. Multicycle tapped into this trend with hand-made bicycles that offered premium levels of comfort and quality.

The passion that Multicycle's highly skilled workers put into their work frequently led to innovations that made cycling easier and safer. Today, Multicycle has matured into a heritage brand with a leading range of e-bikes. Multicycle's e-bikes combine quality, proven engineering, and the highest-quality parts.

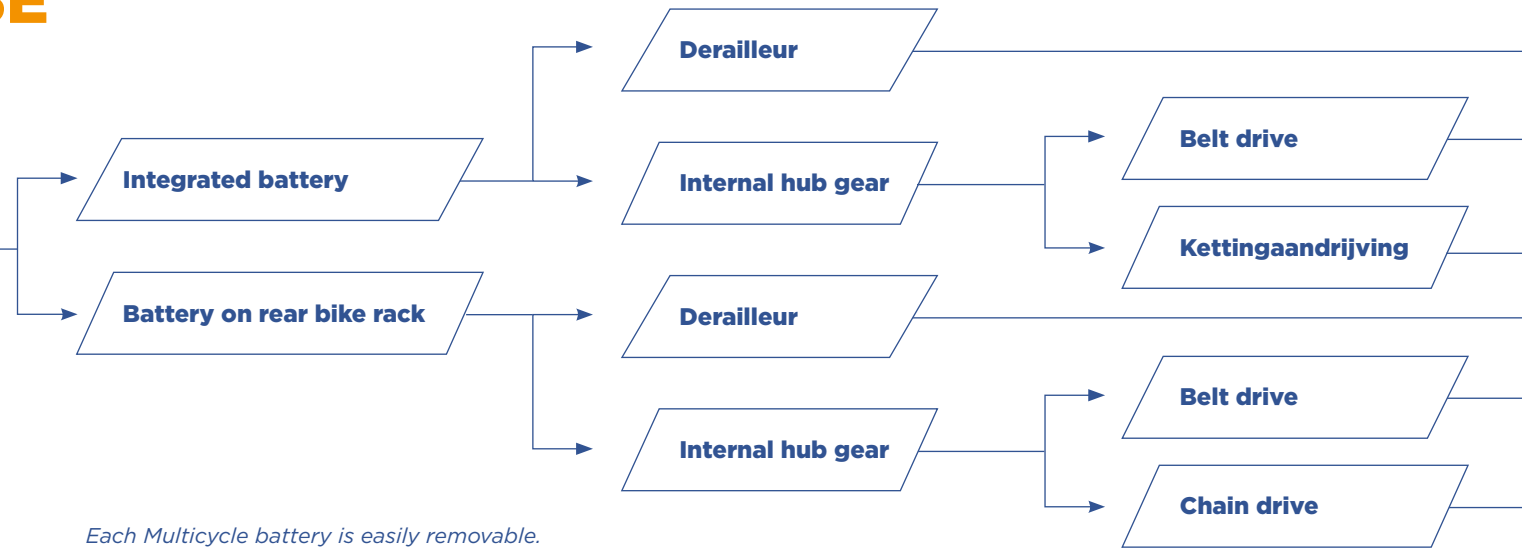

Our e-bikes are built with great care in a modern production facility. Our main drive is still our great passion for quality and craftsmanship, just like it was back in 1977. This is what makes every single Multicycle not only great to look at, but also reliable.

Celebrating 45 years of passion for quality and craftsmanship

CHOOSE YOUR MULTICYCLE E-BIKE WITH EASE

Start: the execution

Not sure which Multicycle best suits your needs? Let us walk you through the various choices to find the e-bike that is right for you. We will also tell you all about the various battery, gearing, and drivetrain options.

1 The battery: integrated or on the rear bike rack?

Integrated into the frame

The battery is incorporated into the design for an even sleeker looking e-bike. The ride feels more stable as the weight of the battery is positioned between the wheels to keep the centre of gravity low.

Multicycle models with integrated battery:

- **Prestige EMS**
- **Legacy EMB**
- **Voyage EMI**

On the rear bike rack

This solution will generally reduce the e-bike's weight. The battery can be removed in no time. Handy when you don't live on the ground floor. Having a slightly lighter e-bike is also ideal for long-distance rides, or when transporting your bike on the back of your car.

Multicycle models with battery on the rear bike rack:

- **Solo EMS**
- **Solo EMI**
- **Solo EMB**

2 Internal hub gear or derailleur?

Internal hub gear

If you generally ride shorter distances up to about 10km per leg on your bike, such as in town, or you want to minimise maintenance, a reliable internal hub gear is perfect for you. Geared hubs offer gearing ratios better suited to urban riding and work better than derailleurs in slower riding around pedestrians and traffic. They can even be changed when standing still at a red light!

Multicycle models with internal hub gear:

- **Legacy EMB**
- **Voyage EMI**
- **Solo EMI**
- **Solo EMB**

3 Belt drive or chain drive?

Derailleur

If you like going on long-distance bike rides or you ride in hilly areas, a derailleur is a good option. A derailleur system offers more gears with finer ratio change between each. It also weighs less and is more efficient than a hub gear.

Multicycle models with derailleur:

- **Prestige EMS**
- **Solo EMS**

Belt drive

A belt is a low-maintenance drive option, ideal for normal day-to-day use of your e-bike. This type of drive delivers pleasant and smooth cycling comfort. Belt drives are also durable and long-lasting.

Multicycle models with belt drive:

- **Legacy EMB**
- **Solo EMB**

Chain drive

A chain is the drive option that maximises pedalling efficiency. It is the best choice if you ride your bike for sport or use your e-bike for recreational rides.

Multicycle models with chain drive:

- **Prestige EMS**
- **Voyage EMI**
- **Solo EMS**
- **Solo EMI**

Shimano mid-drive motor: sporty smoothness

Every Multicycle e-bike is fitted with a Shimano mid-drive motor. Thanks to its smooth and proportionate pedal assist, a Multicycle feels like a comfortable classic touring bike, which in turn ensures a natural and confident ride experience. Because your pedalling power is amplified subtly, you still feel directly engaged with moving the bike forwards despite the 500W peak power. The motor's exceptionally light weight also adds to the natural cycling feeling - and the sensation of flying uphill.

PRESTIGE EMS

PRESTIGE EMS

PRESTIGIOUS, LUXURY PERFORMANCE

Performance

Battery	630Wh integrated into the downtube
Motor	Shimano STEPS E6100
Gear system	Shimano XT Di2

MULTICYCLE PRIVATE LEASE THE BEST E-BIKES WITHIN REACH AND WITHOUT WORRY

Leasing makes the quality of a Multicycle accessible. For an attractive fixed monthly fee, you can ride a Multicycle e-bike without having to worry about repairs, maintenance, breakdown assistance, and insurance.

The benefits of Multicycle Private Lease

- Get the quality of Multicycle without the upfront costs.
- All repair, maintenance, and insurance costs are included.
- Your local Multicycle dealer is always ready to help.
- You can always rely on our breakdown assistance.

Here's how it works

Choose your e-bike at your local Multicycle dealer or on lease. [multicycle.nl](https://www.multicycle.nl). Once you have made your choice, set up the lease with your dealer. As soon as that is done, you can start enjoying your Multicycle e-bike. The Multicycle lease program is available at participating dealers in defined regions. Please inquire at your local dealer for more information.
